| #  | Review                                                                                                                                                                                                                                                                                               |
|----|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1  | I love the app! The app is so much faster to download. You'd stop an entry and it'd be several seconds before it'd actually stop and those extra seconds are added to the entry. Not to mention being unable to use the app when it's syncing because it literally stops responding until it's done. |
| 2  | The app is very laggy on my device which can handle games smoothly. If a person makes two payments consecutively, the second one isn't shown anywhere, not even the profile. I have to check the balance on other payment apps to confirm the 2nd payment.                                           |
| 3  | The app gets stuck and freezes before opening the scanner after clicking the 'Scan QR' button. The app keeps asking again and again to add my mobile number as a UPI number even after clicking 'Not now'.                                                                                           |
| 4  | I love the app. The app is sooo much faster to download. Unable to use the app when it's syncing. But now download is faster and more stable.                                                                                                                                                        |
| 5  | Please fix auto pay. The cancel option does not show for many subscriptions. I keep getting a transaction failed message and still no cancel option.                                                                                                                                                 |
| 6  | Payment stuck issue is quite frequent now which leads to double payments. There should be a favorites section where we can tag frequently used contacts rather than searching.                                                                                                                       |
| 7  | Using the app as a student feels effortless and smooth. The interface is simple, payments are instant, and it saves a lot of time. Especially like how secure and reliable it feels. Perfect for recharges, splitting bills, and small payments.                                                     |
| 8  | The app is sooo much faster. Syncing issue was a real pain but now the download is faster and more stable.                                                                                                                                                                                           |
| 9  | The app performs really well and even includes Splitwise-style features. However, it doesn't have a 'settled up' option. Because of this, if someone hasn't paid yet and still adds a split, you can't ignore or exclude it.                                                                         |
| 10 | My bank account in this app suddenly became inactive on its own. After many attempts and complaints, and despite providing all requested information accurately, my bank account has not been activated till date.                                                                                   |
| 11 | Frequently deducts amounts labeled as 'Google Pay Recharge Code' without any explanation. When asked for an explanation, they fail to provide any reason whatsoever.                                                                                                                                 |
| 12 | Unable to log in. The verification SMS is not being triggered or received, even though I have an active recharge plan and can receive SMS for all other apps. I have now crossed the maximum limit of 6 login attempts.                                                                              |
| 13 | The payments used to be free, now they're charging additional charges for recharge or payments. Received 10 rewards, all said 'better luck next time'. The rewards system is just a way to advertise.                                                                                                |

| #  | Review                                                                                                                                                                                                                                              |
|----|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 14 | The amount of money received isn't showing on my account and whenever I try to make transactions it says insufficient balance. I've lost about Rs.4000 while making transactions online and never received any refunds.                             |
| 15 | Very bad experience. Despite trying multiple times, I have not been able to connect with any customer support representative. No proper response or resolution provided. A payment app should have reliable support.                                |
| 16 | For the last two money transactions, a pop up comes saying more than Rs.5000 cannot be sent from the date of bank activation, but my bank was activated one year back. Issue resolved later, now very happy with the app.                           |
| 17 | UPI payments are very convenient and I appreciate the split expense feature. Suggestion: a dedicated summary section showing who owes whom, total pending balances, and a personal overview of how much I owe and need to receive.                  |
| 18 | Made a mobile recharge and the amount was debited from my account, but the recharge was not successful. The money has not been refunded yet.                                                                                                        |
| 19 | Made a payment. It showed that money was not debited as bank servers are busy and payment failed. Tried again and second payment was successful. But when I checked my bank statement, the money was deducted twice. Ticket was closed incorrectly. |
| 20 | For the past 15-20 days, getting a technical error while making payments even though payments were done successfully and money was debited/credited. Testing needs to be done properly before production release.                                   |
| 21 | Google Pay is a fast and secure digital payment app. It helps users send and receive money instantly using UPI and provides rewards, cashback, and bill payment options all in one place.                                                           |
| 22 | This app needs an automatic locking system once the transaction is over and the app is closed. The app opens automatically when reopened next time without asking for any password or biometric fingerprint.                                        |
| 23 | Worst customer support experience. No proper customer support at all. Responses were very late, useless, and completely unhelpful. No option to download the current month statement properly.                                                      |
| 24 | When entering a phone number to pay, it keeps saying 'something went wrong' and flashes 5-10 times before finally accepting. Very irritating. Have switched to other apps because of this.                                                          |
| 25 | Invited a friend and the app marked them as 'Ineligible for referral offer' for no valid reason. It seems like a scam to get new users without paying the promised rewards. Customer support gives only automated replies.                          |
| 26 | Self transfer was marked successful but the amount was not received. There is an entire fault in the app. The amount of the first transaction has still not been received.                                                                          |
| 27 | Transaction failed but refund took nearly 20 days. Customer support irresponsible, kept saying 'your amount will be credited as soon as possible' with no actual resolution.                                                                        |
| 28 | Unable to make transactions after moving to Germany. App showing that the current version is not available in Germany even though I have the latest version.                                                                                        |

| #  | Review                                                                                                                                                                                                 |
|----|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 29 | Transaction failed 30 days ago. Support keeps repeating 'your money is safe and your issue will be resolved within the next 7 days' but no resolution has been provided.                               |
| 30 | Unable to make any payment for past one month. Keeps showing 'receiver can't accept payment from this bank account'. Many people are facing this problem but no solution found.                        |
| 31 | UPI payment doesn't work. Simply throws an error 'Something went wrong'. Unable to check balance. Support help desk not responding even after 24 hours.                                                |
| 32 | App not showing many received transactions. Have to check bank messages. Rewards getting worse. No dedicated section showing all splits and total owed amounts.                                        |
| 33 | Core problem not solved: when a payment is unsuccessful, it puts users in confusion whether it will be processed later, leading to panic about whether to make another payment. Untrustworthy product. |
| 34 | Critical UI Bug: Two bank accounts with the exact same last 4 digits get merged into one option in the 'Set as Primary' menu. Cannot switch or toggle primary status between the two accounts.         |
| 35 | Requesting the voice notification feature in the personal Google Pay app where the app speaks out the amount received or sent.                                                                         |
| 36 | Tried to complete a simple SIM recharge but the app spins for 10 minutes and ultimately fails. Using the latest version but this keeps happening repeatedly.                                           |
| 37 | Scanner doesn't work, showing upload from gallery option instead. Despite following all instructions, still unable to use the scanner. Have shifted to Paytm which works perfectly.                    |
| 38 | Unable to make any payment. After entering the amount, shows 'something went wrong'. Contacted support but they only say to check internet. Now using PhonePe for 2 months.                            |
| 39 | Everything is very good, it's fast and reliable. Requesting a new savings feature to separate the amount to save from the total balance, which would be very helpful for students.                     |
| 40 | Very slow compared to other UPI apps. Facing technical and server issues for the past few months. Cannot even fetch bank details. Other UPI apps work just fine.                                       |
| 41 | Warning about fake GPay vouchers. When redeeming coupons and placing orders, the product is never delivered but money gets deducted. No proper response from support when reported.                    |
| 42 | Payment not confirmed for 5 days despite raising a dispute 3 days ago. Now being told to contact the merchant as GPay can't do anything about it.                                                      |
| 43 | Paid Rs.199 for a Netflix subscription. Transaction shows successful but Netflix says payment failed at payment gateway. Both GPay and the bank are redirecting to each other without resolving it.    |
| 44 | 3 Gmail accounts and 2 mobile numbers suspended without proper reason. Customer care only says 'you will get an update on email' but no clear response ever received.                                  |
| 45 | Transactions keep failing for almost 2 months. Tried every possible fix as directed by the app but issue not resolved.                                                                                 |

| #  | Review                                                                                                                                                                                                         |
|----|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 46 | Tap and pay asks for authentication but after authenticating, does not process the transaction and asks to try again. The vendor needs to reset everything in their POS machine each time, making it unusable. |
| 47 | App shows a security popup and won't let the device use the app. No software updates are available for the older phone. Other apps work just fine.                                                             |
| 48 | Scammed with rewards. Purchased a powerbank from the rewards section and received a used broken one that cannot charge anything. No replacement and asked to bear courier expenses.                            |
| 49 | Serious bug: The bank name shown is different and the UPI ID is linked to another bank. When payment is done using this UPI ID, the amount goes to the wrong bank.                                             |
| 50 | Transaction failed but amount was debited. Not refunded. Help center not reachable. No one should use this app as they won't help if there is any problem.                                                     |
| 51 | Payment to wrong person due to multiple contacts having the same first name in history. Requesting a feature to add name tags for payees to avoid confusion.                                                   |
| 52 | Transaction system is great and smooth. The rewards section is not useful at all - coupons are for apps that are hardly ever used. Rewards should be improved to be actually useful.                           |
| 53 | Very poor service. A gift card was marked as 'already used' immediately without actually using it. After asking for help, was accused of using it. Support response came after 2 months with no resolution.    |
| 54 | Money credited to bank but not reflected on GPay. Then debited after a few hours causing a loss of money. This vital issue has been raised since 2023 and still persists.                                      |
| 55 | Money transferred to account but no notification received despite all permissions being enabled.                                                                                                               |
| 56 | Dealing with customer support for over a year. No issue resolved, completely ignored by Google.                                                                                                                |
| 57 | Worst service. Scamming people via UPI Lite - amount gone without any proof of transactions. Support has been investigating for 2 months with no result.                                                       |
| 58 | Always giving useless and worthless vouchers. Tons of platform fees. No cashback. Not reliable.                                                                                                                |
| 59 | Jio recharge payment failed 2 months ago. Money still not refunded despite multiple emails. Shifted to Paytm.                                                                                                  |
| 60 | Really a good app but requesting a feature to set a monthly spending limit manually.                                                                                                                           |
| 61 | Good app but requesting a spending limit feature to control monthly expenses.                                                                                                                                  |
| 62 | UI is very simple, clean, and user friendly. Privacy feature with UPI ID linked to Gmail instead of showing the full mobile number feels secure, reliable, and trustworthy.                                    |
| 63 | Disappointed with GPay lately. Cashback offers were the main reason to use the app, but now they are almost gone. Replaced with 'gold membership' and shopping deals not useful for regular users.             |
| 64 | Very convenient to send money. Requesting option to download statement beyond last 6 months with a custom date range.                                                                                          |

| #  | Review                                                                                                                                                                                         |
|----|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 65 | Excellent experience for daily transactions. Payments are fast, secure and easy to use. Highly recommended for a smooth digital payment experience.                                            |
| 66 | Payment service is smooth. Disappointed with rewards being coupons that redirect to third-party websites that look low quality and sometimes suspicious. Direct cashback would be much better. |
| 67 | Can't do any in-app purchases. Fed up with updating payment and card details every time there are payment errors.                                                                              |
| 68 | Payments are instant, interface is clean, and rewards are a bonus. Works flawlessly for bills, UPI, and transfers. Highly recommended.                                                         |
| 69 | Account balance cut by over Rs.300 in two days without explanation. Similar issues have been recurring over the past 3 years totaling nearly Rs.1.8 lakh.                                      |
| 70 | UPI Lite not working and money is stuck in it. Support only sent a mail asking to keep patience.                                                                                               |
| 71 | Hard to find the gold purchase option. Gold Locker is not visible on the main screen unlike other apps such as PhonePe and CRED where the gold option is clearly visible.                      |
| 72 | All transactions stopped after reinstalling the app. Now it says the app is blocked on this device.                                                                                            |
| 73 | Gold locker purchase is smooth but selling always fails. Contacted support multiple times but no response.                                                                                     |
| 74 | Took a 4-day free trial and cancelled before it ended. Subscription service confirmed cancellation but GPay still deducted money. Both parties are redirecting to each other.                  |
| 75 | GPay is very convenient, secure and easy to use. Transactions are lightning-fast and the interface is intuitive. Love the added security features like UPI PIN and biometric auth.             |
| 76 | UPI Lite showing reactivate option repeatedly after an update. Unable to delete UPI Lite or remove bank account from the app. Customer support is very pathetic.                               |
| 77 | Payments getting stuck frequently. Amount gets debited but not credited to the recipient. Called customer service too many times but refund is still not credited.                             |
| 78 | Refund not received for 25 days. No commitment on when refund will arrive. Very disappointing experience compared to other apps which take 7-10 working days.                                  |
| 79 | Transaction incomplete since January 31. Bank account debited but Google support won't help. Even shopping apps have better support.                                                           |
| 80 | Transaction failure confirmation takes 4 days which is very frustrating. Requesting addition of Jio Fiber, Jio AirFiber, Excitel broadband recharges, school fees, and metro ticket services.  |
| 81 | Good service overall but GPay Lite issue not resolved despite multiple contacts with support.                                                                                                  |
| 82 | Transactions smooth and reliable. Most rewards are just vouchers which many users don't find useful. Direct cashback would be better. UI good but could use some polishing.                    |
| 83 | Every payee automatically gets added to the home screen cluttering it over time. Cannot delete any such payees. Have accidentally paid the wrong person with a similar name because of this.   |

| #   | Review                                                                                                                                                                                  |
|-----|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 84  | Requesting a feature where the user can set a spending cap and the app sends a notification when approaching the limit.                                                                 |
| 85  | Server is slow and unresponsive. Received transactions not showing in history even though balance changed.                                                                              |
| 86  | Gold locker payment failed. Refund not received after 15 days despite contacting customer service multiple times. Each time told to wait another 7 days.                                |
| 87  | UPI Lite stopped working suddenly with Rs.500+ stuck in it. Trying to reactivate but the screen goes blank after tapping activate.                                                      |
| 88  | Rs.1,300 transferred to the wrong person because the phone number was previously linked to another user and later reassigned. Dispute raised with bank but no resolution yet.           |
| 89  | A reward showed an item at Rs.2,399 but the actual product value was only Rs.399. Very misleading and disappointing reward experience.                                                  |
| 90  | Invested in gold at a profit but when trying to sell, the app is not allowing it. Customer service calls being disconnected without consent.                                            |
| 91  | Different bank name showing in UPI ID - an Axis Bank account can have @oksbi ID. Unable to restore old UPI ID used for years. No support mechanism available.                           |
| 92  | Account suspended after requesting suspension due to a stolen phone. Reactivation has been failing for 8 months despite submitting all required documents.                              |
| 93  | Serious issue with UPI Lite: cannot add money, cannot send payments, and unable to delete UPI Lite. Everything stuck with no proper error message.                                      |
| 94  | Very good app. Can send money, do gas booking, mobile recharging, and TV recharging all through one app.                                                                                |
| 95  | Unable to link bank account even after putting all accurate information and card details.                                                                                               |
| 96  | PIN entry page changed suddenly and looks completely different from usual. It doesn't look like the GPay app. Unsure if it is safe to proceed with payment.                             |
| 97  | Suggestion: Add a category option such as Grocery, Petrol, Food, Shopping, Bills, or Travel when making payments. This would help track and understand spending by category.            |
| 98  | Impossible to cancel Autopay for third-party apps. FAQ and help center have no proper guidelines. It feels like users are forced to continue subscriptions.                             |
| 99  | Simply the worst app. Absolutely useless and unreliable. Doesn't connect at all or do anything it's supposed to.                                                                        |
| 100 | Very secure and reliable UPI payment app. Transactions are fast, the interface is simple, and it makes digital payments very convenient.                                                |
| 101 | Good app but NFC does not work on first tap. After unlocking and tapping for NFC payment, the payment does not go through. Need to tap again forcing the seller to reenter all details. |

| #   | Review                                                                                                                                                                              |
|-----|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 102 | Added Rs.4000 in UPI Lite but the whole amount is showing as nil without any proof of transactions.                                                                                 |
| 103 | Unable to do any payments for 2 weeks. 'Error something went wrong' keeps showing despite updating the app and changing UPI IDs.                                                    |
| 104 | Worst customer service. When they don't have a solution, they disconnect the call. Happens every single time.                                                                       |
| 105 | App switches when sending SMS due to flash card. No split screen support, making it impossible to complete UPI registration.                                                        |
| 106 | Used an offer card to buy a product. Order was never shipped from the manufacturer. Seller not responding and GPay also not responding to the complaint.                            |
| 107 | Very poor customer service. No step taken and no solution given despite repeated contact. Completely left to solve issues on your own.                                              |
| 108 | Money transfer not reflecting in the app. Ticket raised but not resolved.                                                                                                           |
| 109 | Digital gold selling always fails. Continuously failing for the last 3 days.                                                                                                        |
| 110 | Stop sending rewards notifications if you cannot provide actual rewards.                                                                                                            |
| 111 | GPay coupon showed a USB cable for Rs.300 but the actual price of the same product was Rs.79 on e-commerce without any voucher. Very misleading.                                    |
| 112 | GPay vouchers are misleading. Same product is available cheaper on e-commerce platforms without any voucher. What is the point of having coupons that don't offer any real savings? |
| 113 | Requesting freedom to choose custom UPI IDs, as all other apps allow users to select their own UPI IDs.                                                                             |
| 114 | No tab to see all groups that have been created. Can't remember the names of groups. When introducing a feature, the second-order effects should be thought through properly.       |
| 115 | Suggestion: Add an emergency cash option that helps users spend less and save money securely.                                                                                       |

# Google Pay

## Privacy Policy & Terms and Conditions

Company: Google India Digital Services Private Limited

Website: [pay.google.com/intl/en\\_in/about/terms/](https://pay.google.com/intl/en_in/about/terms/)

Last Updated / Sourced: April 2026 (Sourced from official Google Pay India terms)

This document compiles the key privacy policy provisions and terms & conditions as publicly available from the official platform. It is intended for informational purposes. Always refer to the official website for the most current version.

# PART I — PRIVACY POLICY

---

## Overview & Applicability

Google Pay (formerly Tez) is operated by Google India Digital Services Private Limited, registered at 5th Floor, DLF Centre, Block 124, Narindra Place, Sansad Marg, New Delhi - 110001. The Privacy Policy governs how Google Pay collects, uses, stores, and shares your personal information when you use the platform. By accessing or using Google Pay, you agree to the collection and use of information in accordance with this policy and the overarching Google Privacy Policy.

## Information Collected

During registration or at any time thereafter, Google Pay may collect: your name, phone number, date of birth, payment instrument details (bank account number, credit/debit card details), and other registration information. Google Pay may also receive transaction data, account information, and other personal data from third parties such as merchants, banks, and payment participants. This data collection is governed by the Google Privacy Policy.

## UPI & PSP Data Handling

For UPI transactions, Google Pay acts as a Third Party Application Provider (TPAP) authorised by NPCI. UPI operations are facilitated through PSP Banks: HDFC Bank, Axis Bank, ICICI Bank, and State Bank of India. Personal data processed by a PSP Bank during UPI transactions is subject to that PSP Bank's own privacy policy. Google is a service provider in this chain and does not independently hold banking licenses for UPI operations.

## Data Usage

Google uses your data to provide and improve its services, display transaction details, process payments, communicate with you, verify identity, prevent fraud and comply with legal obligations. As permitted by its privacy policies, Google may collect transaction, account, and other personal information from third parties including merchants and your payment method's issuer to enrich your in-app experience.

## Data Sharing

Google may share your data with: affiliated companies, Payment Participants (banks, card networks), third-party service providers under contractual obligations, and regulatory or law enforcement authorities as required by law. Google does not sell your personal data to advertisers.

## Data Storage & Security

Google employs industry-standard security measures to protect your data. Sensitive data is stored on secure servers. Google adheres to applicable Indian data protection laws including the Digital Personal Data Protection Act, 2023 and guidelines from RBI and NPCI.

## User Rights & Grievances

You can manage, review, and request deletion of your data through your Google Account settings. For grievances related to Google Pay in India, users may contact Google Pay's customer support through the app's Help section. Disputes may also be raised with the RBI Ombudsman at [cms.rbi.org.in](https://cms.rbi.org.in). Google reserves the right to update this policy and will communicate significant changes through the app or website.

## PART II — TERMS & CONDITIONS

---

### Acceptance of Terms

By accessing, downloading, or using Google Pay, you agree to comply with and be bound by the Combined Google Pay Terms, which include the Universal Google Terms of Service, the Google Pay Terms of Service for India Residents, the Google Pay Payments Terms, the Google Pay Complaints Handling Policy, and any other policies incorporated by reference. If you do not agree, you must not use Google Pay.

### Eligibility

You must be a resident of India and hold a valid Indian bank account and mobile number to use Google Pay. You must be of legal age to enter into a binding agreement under Indian law. By using Google Pay, you represent that you meet all eligibility requirements.

### Permitted Use

Google Pay may be used for person-to-person transfers, merchant payments, bill payments, mobile recharges, and other services available on the platform. You agree not to use Google Pay for illegal purposes, unlawful transactions, or in violation of applicable laws and regulations. Google Pay cannot be used for purchase, sale, or trade of cryptocurrencies in India.

### Payment Instruments

Use of a payment instrument (bank account, debit/credit card) on Google Pay is governed by these terms and the issuer's own terms and privacy policy. Google is not a party to your payment method's user agreement. Google does not guarantee that your issuer will authorise any transaction.

### Liability Limitations

GOOGLE PARTIES SHALL NOT BE LIABLE FOR ANY INDIRECT, CONSEQUENTIAL, SPECIAL, PUNITIVE, OR EXEMPLARY DAMAGES. In no event shall Google's total cumulative liability exceed INR 40,000 (Forty Thousand Rupees) for lending facilitation services. Nothing herein excludes liability for death, personal injury, fraud, or fraudulent misrepresentation.

### Changes & Termination

Google reserves the right to modify, suspend, or terminate Google Pay or any of its features at any time. You will be notified of material changes via the app or registered contact. Continued use after notification constitutes acceptance of the updated terms.

### Governing Law & Dispute Resolution

These terms are governed by the laws of India. Disputes shall be referred to binding arbitration under the Indian Arbitration & Conciliation Act, 1996, before a sole arbitrator, with the seat of arbitration in New Delhi. You or Google may seek interim relief from competent courts in New Delhi. For UPI-related issues, the NPCI grievance mechanism also applies.

### Intellectual Property

All content, design, trademarks, and materials on Google Pay are the intellectual property of Google or its licensors. You may not reproduce, distribute, or create derivative works without explicit written permission from

Google.
